To: Hiring Team at Amazon (ADCI)
Position: Front-End Engineer II (Ref: A10575321)

Dear Hiring Team,

I am writing to express my strong interest in the **Front-End Engineer II** position at **Amazon (ADCI)**. With over 8 years of dedicated experience delivering responsive, accessible, and high-performance web interfaces for enterprise clients and scaling businesses—including Samsung SDS, Cisco, and Wondrfly—I specialize in translating complex Figma designs into production-ready HTML5, SCSS, and Angular Material component architectures.

At Wondrfly, I translate design specifications into production-ready UI, ensuring visual consistency across complex layouts and responsive breakpoints while contributing to Playwright-based browser automation to validate UI behavior. I also designed an impact-based bug validation workflow connecting task context, Git change analysis, and targeted Playwright tests so verification focuses on impacted components instead of executing full end-to-end suites.

Prior to Wondrfly, as Assistant Manager - Web Publisher at Samsung SDS, I received a 97/100 performance rating for outstanding code quality, precision, and adherence to strict enterprise design systems and accessibility standards across core Samsung HQ platforms. Similarly, for Cisco, I engineered frontend components for the Business Process Automation (BPA) Portal and SD-WAN UI interfaces.

I take pride in writing clean, semantic markup, upholding WCAG accessibility standards, optimizing Core Web Vitals, and continuously leveraging AI-assisted workflows (Cursor AI, Claude) to accelerate defect isolation and test generation. I welcome the opportunity to discuss how my frontend depth and enterprise delivery track record can support Amazon (ADCI)'s objectives.

Warm regards,

Ashutosh Kumar
